

How to delete material revision level in SAP

The SAP revision levels are typically used to identify that smaller changes to the material have been done like updating specifications, updating drawing information (but no changes that would change the form of the product). A revision level is set for the material at client level, it's shown in almost all the views of the material master right under the material number. The revision level is available in the BOM, MD04, PR, PO and SA however the stock is not segregated by revision level so in MMBE you will not see this revision level, nor will the stock be separated by revision level.

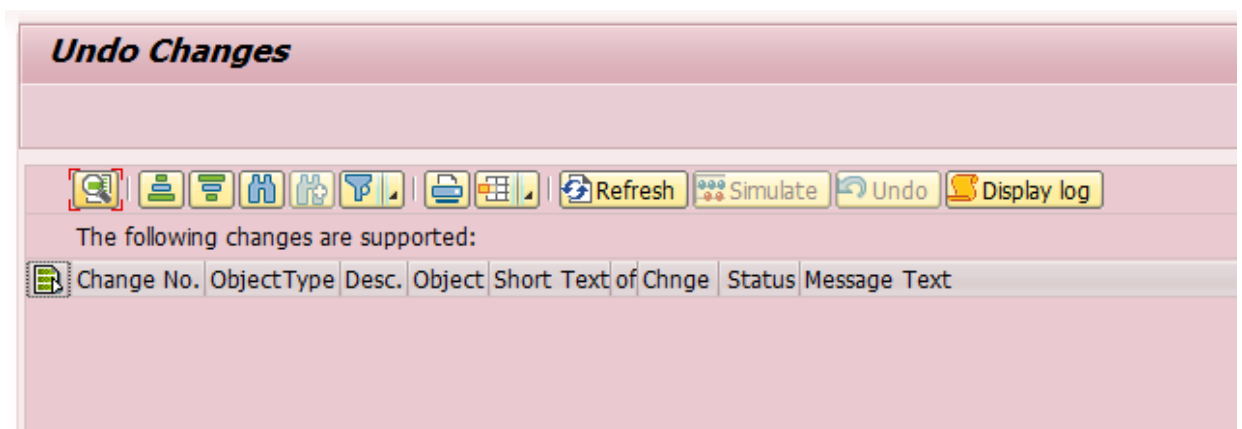

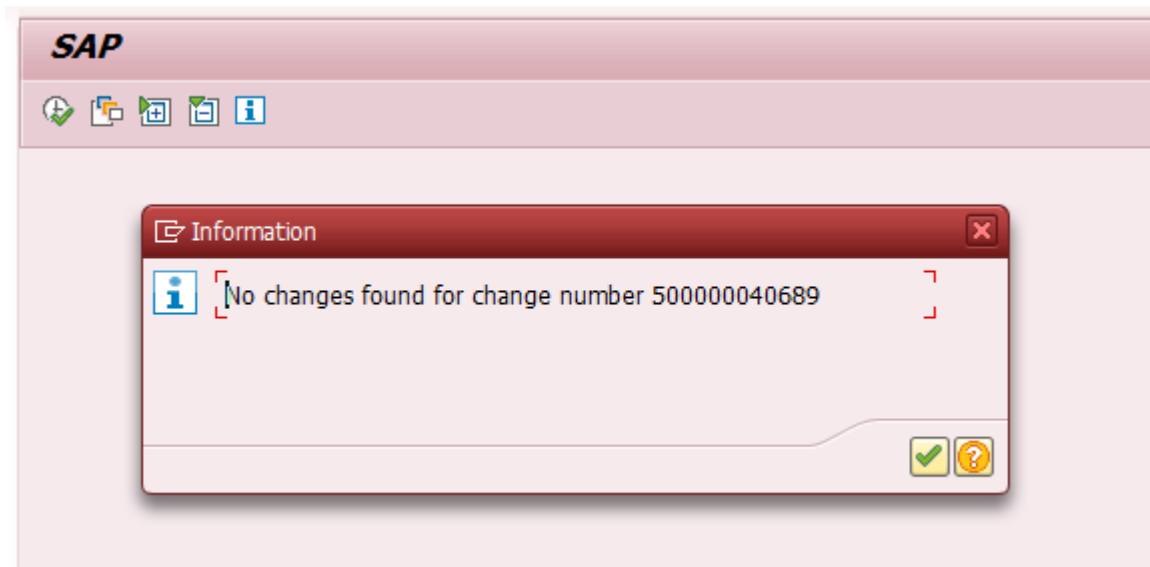

A material can indeed have multiple revision levels assigned mostly in increasing sequence. Only one revision level can be the active.

Here is the instruction how it possible to delete material revision level from change or delete change permanently:

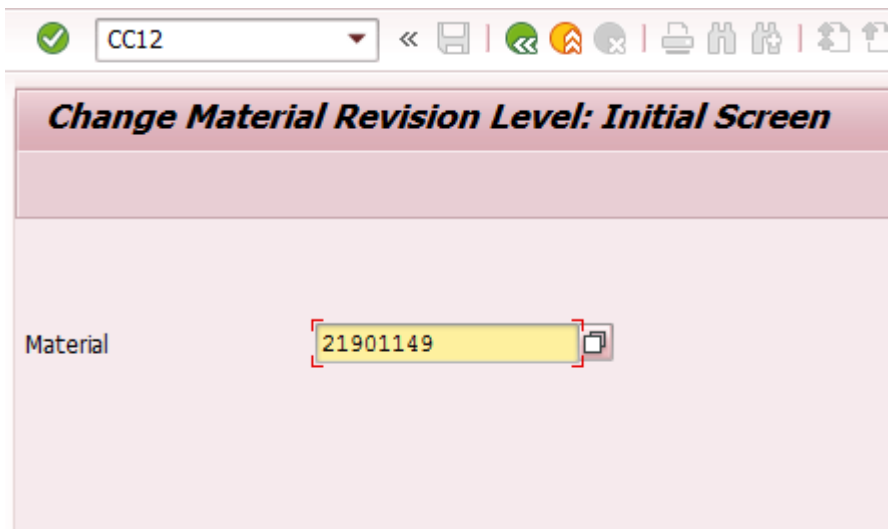

1. Transaction CCUNDO - undo the changes against change number to be

The screenshot shows the SAP CCUNDO transaction interface. At the top, there is a green checkmark icon and a dropdown menu showing 'CCUNDO'. To the right of the dropdown are several icons: a double left arrow, a floppy disk, a green circle with a white arrow, a yellow circle with a white arrow, a red circle with a white 'X', a printer, two people icons, a document with a checkmark, a document with a cross, and a gear. Below this is a red header bar with the text 'Undo Changes with Engineering Change Management'. Underneath the header bar is a green checkmark icon. At the bottom, there is a field labeled 'Change Number' with the value '500000040689' entered. The field has a yellow background and a red border.

deleted.

2. Transaction CC12 - delete the revision level for material.
